Continuation of 4(e) Other: Claims 1-19 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Applicant's original claims were drawn to a nucleic acid vaccine encoding a neuroreceptor antigen and methods of use. Applicant has amended the claims to read on a NMDA antigen. NMDA is a neurotransmitter, not a neuroreceptor. NMDA and an NMDA receptor have patentably distinct structures and functions. Specifically, the epitopes that make up an NMDA antigen are different from those that make up an NMDA receptor antigen, due to the sequence differences of the two proteins.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, since the claims have been amended to reflect an invention different that originally presented, e.g. a neuroreceptor, the claims are non-compliant.
